

## CLAIM AMENDMENTS

1 - 11. (canceled)

1           12. (currently amended) In combination with a power  
2 track having a slot in which are exposed electrical conductors, an  
3 adapter comprising:

4           a housing having an insert part fittable into the slot;  
5           a shaft extending into the insert part and pivotal about  
6 a shaft axis in the housing between a use position and a nonuse  
7 position

8           a conductive contact element ~~rotationally fixed to the~~  
9 shaft, having a contact projecting radially from the shaft and  
10 engageable with one of the power-track conductors when the insert  
11 part is fitted to the slot and the shaft is in the use position,  
12 and having a one-piece plug-type terminal extending generally  
13 parallel to the axis;

14           means including formations unitarily formed with the  
15 contact element and the shaft for axially and rotationally fixing  
16 the contact element on the shaft; and

17           a hookup wire provided with another plug-type terminal  
18 mated with the contact-element terminal.

1               13. (previously presented) The power-track adapter  
2       defined in claim 12 wherein the contact is unitarily formed with  
3       the contact element.

1               14. (previously presented) The power-track adapter  
2       defined in claim 13 wherein the contact element is formed as a  
3       spring urging the contact radially outward.

1               15. (previously presented) The power-track adapter  
2       defined in claim 12 wherein the control shaft is at least partially  
3       hollow.

1               16. (previously presented) The power-track adapter  
2       defined in claim 15 wherein the control shaft is formed with a  
3       throughgoing passage, the adapter further comprising  
4               another feed wire extending through the passage.

1           17. (previously presented) The power-track adapter  
2       defined in claim 12, further comprising

3           a second conductive contact element separate from the  
4       first-mentioned contact element, rotationally fixed to the shaft,  
5       having a contact projecting radially from the shaft, and engageable  
6       with another of the power-track conductors when the insert part is  
7       fitted to the slot and the shaft is in the use position, and having  
8       a one-piece plug-type terminal extending generally parallel to the  
9       axis; and

10          a second hookup wire separate from the first-mentioned  
11       hookup wire and provided with a plug-type terminal mated with the  
12       second contact-element terminal.

1           18. (previously presented) The power-track adapter  
2       defined in claim 18 wherein the other plug-type terminal of the  
3       hookup wire is displaceable axially in the housing for connection  
4       with and disconnection from the contact-element terminal.

1               19. (new) In combination with a power track having a  
2     slot in which are exposed electrical conductors, an adapter com-  
3     prising:

4               a housing having an insert part fittable into the slot;  
5               a shaft extending into the insert part and pivotal about  
6     a shaft axis in the housing between a use position and a nonuse  
7     position

8               a conductive contact element rotationally fixed to the  
9     shaft, having a contact projecting radially from the shaft and  
10    engageable with one of the power-track conductors when the insert  
11    part is fitted to the slot and the shaft is in the use position,  
12    and having a one-piece plug-type terminal extending generally  
13    parallel to the axis; and

14              a hookup wire provided with another plug-type terminal  
15    mated with the contact-element terminal and displaceable generally  
16    parallel to the axis.

1           20. (new) In combination with a power track having a  
2       slot in which are exposed electrical conductors, an adapter com-  
3       prising:

4           a housing having an insert part fittable into the slot;  
5           a one-piece shaft extending into the insert part and  
6       pivotal about a shaft axis in the housing between a use position  
7       and a nonuse position;

8           a conductive contact element rotationally fixed to the  
9       shaft, having a contact projecting radially from the shaft and  
10      engageable with one of the power-track conductors when the insert  
11      part is fitted to the slot and the shaft is in the use position,  
12      and having a one-piece tongue-shaped plug-type terminal extending  
13      generally parallel to the axis; and

14           a hookup wire provided with a plug-type terminal mated  
15      with the contact-element terminal.
